Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

	Application No.	Applicant(s)					
	10/533,488	DU ET AL.					
Office Action Summary	Examiner	Art Unit					
	Elizabeth D. Wood	1755					
The MAILING DATE of this communication a	ppears on the cover sheet with the c	correspondence address					
Period for Reply		(O) OD TUUDTY (OO) DAYO					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Art Unit: 1755** 

## Specification

The examiner has not checked the specification to the extent necessary to determine the presence of **all** possible minor errors (grammatical, typographical and idiomatic). Cooperation of the applicant(s) is requested in correcting any errors of which applicant(s) may become aware of in the specification, in the claims and in any future amendment(s) that applicant(s) may file.

Applicant(s) is also requested to complete the status of any copending applications referred to in the specification by their Attorney Docket Number or Application Serial Number, if any.

The status of the parent application(s) and/or any other application(s) cross-referenced to this application, if **any**, should be updated in a timely manner.

## Preliminary Amendment

The preliminary amendment filed April 28, 2005 is technically non-compliant. The presented amendment offers claim modifiers apparently based on the application as prosecuted in the International Stage, which is completely independent from this application. However, the examiner is waiving the requirement, but suggests that care be taken when presenting the next list of cliams to recite the claim status in this application.

## Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Application/Control Number: 10/533,488 Page 3

Art Unit: 1755

Claims 1-33 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The originally filed specification does not provide support for the claimed limitation "2.430nm". Both the originally filed specification and claim 1 recite "2.435nm".

Claims 1-33 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a composition having a rare earth content from 6-16% by weight, does not reasonably provide enablement for the recitation of 4 to 15% by weight. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims.

#### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim Rejections - 35 USC § 103

Application/Control Number: 10/533,488

Art Unit: 1755

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-33 are rejected under 35 U.S.C. 102(a) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over US 2003/0064881 to Du et al.

The instantly claimed invention involves a rare earth zeolite composition, method for the production thereof and cracking process using this catalyst.

Art Unit: 1755

Du et al. disclose a composition comprising rare-earth exchanged zeolite Y. The amount of rare earth is well within the amount claimed herein. The cell sizes of the compositions are virtually identical. The method of making the zeolite does not appear distinguishable from the instantly claimed method. Accordingly, the expectation that identical catalyst is produced is high. Du et al. Use the catalyst for the same process being claimed in the instant application.

It is well settled that when two compositions are so similar as to be indistinguishable, it is proper to shift the burden to applicant to demonstrate that there is indeed some difference. See particularly the claims and the examples, but the entire document is highly relevant.

Applicant cannot rely upon the foreign priority papers to overcome the above rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Claims 1-14 are rejected under 35 U.S.C 103(a) as obvious over US 5,535,817 to Dunne.

Dunne discloses a rare earth containing zeolite Y composition having unit cell dimensions on the order of those set forth in the instant claims and this is considered sufficient to embrace the instantly claimed invention. Although Dunne teaches calcining to achieve this size, process limitations such as "100% steam-again treatment" have little weight in product claims as long as the product limitations are achieved. Steam stabilization is mentioned in the reference, however. The amount of rare earth employed by the reference is about 3.5-12 percent by weight. See particularly column 5

Application/Control Number: 10/533,488 Page 6

Art Unit: 1755

and example 1. Neither sodium content nor silica to alumina ratio is explored by the reference. Accordingly, it would appear that any known amount would be effective, and the amounts chosen by applicants are within the range of prior art catalyst compositions. Since the zeolite of Dunne has the same composition and crystal structure as the instantly claimed invention, it is presumed that the claimed collapse temperature is an inherent feature of the zeolite under examination.

#### **Double Patenting**

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-31 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-8 of U.S. Patent No. 6,787,132.

Although the conflicting claims are not identical, they are not patentably distinct from

**Art Unit: 1755** 

each other because they differ only slightly from one another in the recitation of the method for making the rare earth zeolite Y composition under examination. The instant claims recite a binder, but such recitation is so well known and obvious to the claimed artisan that it would have been obvious for the structural improvement of the product. The claimed composition is inherently produced by the process of the patented claims.

#### Conclusion

Applicants are advised that any evidence to be provided under 37 CFR 1.131 or 1.132 and any amendments to the claims and specification should be submitted prior to final rejection to be considered timely. It is anticipated that the next office action will be a final rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth D. Wood whose telephone number is 571-272-1377. The examiner can normally be reached on M-F, 5:30-2:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jerry Lorengo can be reached on 571-272-1233. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
